Marketplace Seller Documents for New SKU Feeds

Welcome to the Rakuten.com Shopping Marketplace Resource Library for New SKU Creation. Merchants can now use two methods to upload New SKU Feeds to the Rakuten.com Shopping catalog.

New SKU Tool: This web-based tool will guide you through the product content data entry. Only Marketplace Merchant Account holders can use the New SKU Tool. To access the tool:

1. Logon to your Merchant Account
2. Click the "Add New SKUs" text link and follow the directions

New SKU Feed: New SKU Feeds are used to add new products to Rakuten.com Shopping's catalog. We've created and gathered various documents and instructions on how to create the New SKU Feed to assist you.

*****Attention***** Adding new products to the Rakuten.com Shopping catalog does not list the products for sale on the Rakuten.com Shopping website. A New SKU Feed has been created, you must use an Inventory Feed or click View Your SKUs in your Merchant Tools to list it for sale. [Click here to get the Inventory Feed template](#)

This page is divided by product categories. Each category has the following documentation you will need to download in order to get started with creating the New Product Feed:

- **New Product Feed Specifications** - Provides definitions of each of the fields in the New Product Feed
- **New Product Feed Creation Guide** - Step-by-step instruction on how to create a New Product Feed
- **New Product Feed Template** - An Excel template of the New Product Feed for easier data entry
- **Category Attributes** - Category IDs and Attributes you need to place your products in the correct categories with the correct attributes

For your convenience, we also include the date when we last updated each document. We do update these periodically, so please consult the latest specifications.

Please Note: All New SKU Feeds should be sent via email to MPIntegration@mail.rakuten.com for validation and processing unless you are using the New SKU Tool. You must be approved to **upload** the New Product Feeds through the Merchant Tools of your account but you can create New SKU Feeds. To request approval to upload New SKU Feeds also contact MPIntegration@mail.rakuten.com.

If you have any questions regarding the New SKU Tool or New SKU Feed, please contact us at MPIntegration@mail.rakuten.com.

New SKU Feed Documents: Clothes & Shoes

New Product Feed Specifications: (Updated 04/21/10)

New Product Feed Creation Guide: (Updated 11/22/11)

New Product Feed Template: (Updated 02/08/2013)

Category Attributes: (Updated 02/08/2013)

You will need to download 3 documents:

- New SKU Feed Template
- New SKU Feed Specifications
- Category Attributes

New SKU Feed documents: Home & Garden

[New SKU Feed Specifications:](#) (Updated 04/21/10)

[New SKU Feed Template:](#) (Updated 06/02/10)

[Category Attributes:](#) (Updated 06/02/10)

New SKU Feed Template

The New SKU Feed Template is an Excel spreadsheet we provide for easier data entry. It looks like the following:

1	seller-id	isbn	mfg-name	mfg-part-number	asin	seller-sku	title	descriptor	main-image	additional-images	weight	features	listing-price	msrp	category-id	keywords	product-set-i	AC Type	Age Range	Age Segment	Appliance	Appliance Power
2																						
3																						
4																						
5																						
6																						
7																						
8																						
9																						
10																						
11																						

The first row consists of the titles of the data fields. Every row after that will be used to populate the data of a new product you want to add to the Rakuten.com Shopping product catalog.

NOTE! Do not delete or rearrange the order of the data fields as this will cause the New SKU Feed to fail. Use the New SKU Feed Template exactly the way it's presented.

The New SKU Feed Template consists of two areas; **Core Data** and **Attribute Data**.

1	seller-id	isbn	mfg-name	mfg-part-number	asin	seller-sku	title	descriptor	main-image	additional-images	weight	features	listing-price	msrp	category-id	keywords	product-set-i	AC Type	Age Range	Age Segment
CORE DATA																		ATTRIBUTE DATA		

Core Data represents the product data we use to create the product in our database or catalog. *Attribute Data* provides additional product content on the site, creates some drop-down menus on the product pages and builds-out the left side navigation on the site.

The *New SKU Feed Specifications* and *Category/Attribute* documents give details and definitions regarding each of the data fields in the New SKU Feed Template as well as indicating which one of those fields are required or not required.

New SKU Feed Specifications (1st page)

NEW SKU FEED

The New SKU Feed and process allows you to create new SKUs within the Rakuten.com Shopping catalog.

1. New SKU Feed should be encoded in UTF-8 (plain text), and delimited by Horizontal Tab (ASCII hexadecimal 9), otherwise known as a **Tab Delimited Text** file.
2. Please ensure that:
 - a. The file starts off with a header line that declares all the fields.
 - b. Each field name is represented in the file (including optional).
 - c. Each field in your field file is **tab delimited**.
 - d. Each product is on a separate line within the file.
 - e. Any non-required field that has no data must be left completely blank.

Fields for Marketplace New SKU Feed

Field Name	Comments	Required	Data Type	Length
merchant-id	Integer identifying the merchant creating the product. You can find your merchant-id by logging into your account. The merchant-id will appear in the upper right hand corner of the Merchant Tools page. Example: 15582389	Yes	integer	
gtin	Provide the GTIN compatible product identifier (i.e. UPC or EAN). UPCs must be 12 or 14 digits in length. EANs must be 13 digits in length. Example: 614141543212 or 00614141543212	Yes	string	14
isbn	Provide the ISBN number of the product, if applicable. ISBNs are usually associated with Books. Provide digits only, without hyphens. Example: 9783161484100	No	string	13
mfg-name	The name of the brand/manufacturer that creates this product. Do not include any special characters, symbols, or punctuation. Keep completely alpha-numeric. Example: Kodak	Yes	string	50
mfg-part-number	The unique product id assigned to the product by the manufacturer. The 'mfg-part-number' needs to be unique per manufacturer, and it doesn't need to be unique across all manufacturers. Example: 8500282MW	Yes	string	50

Category/Attribute Reference (1st page)

Taxonomy Categories - Home & Garden		
* Cannot contain products - exists as parent category only. [attributeName] Required attribute [<attributeName1>, <attributeName2>] At least 1 of the listed attributes are required.		
Category ID		
	Home & Garden *	Room
	Appliances *

0265	Mixers	Same as parent

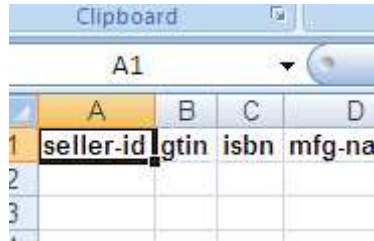

CREATING A NEW SKU FEED

As an example, we're going to complete a New SKU Feed to add a Cuisinart coffee maker.

Open the New SKU Feed Template, in this case we'll be using the one for Home & Garden, which represents the major category that coffeemarkers live.

A1	seller-id																										
1	seller-id	gtin	isbn	mfg-name	mfg-part-number	asin	seller-sku	title	descriptor	main-image	additional-images	weight	features	listing-price	msrp	category-id	keywords	product-set-id	AC Type	Age Range	Age Segment	Appliance	Appliance Power				
2																											
3																											
4																											
5																											
6																											
7																											
8																											
9																											
10																											
11																											

The first data field is called "seller-id", which is all numerical and required.

	A	B	C	D
1	seller-id	gtin	isbn	mfg-na
2				
3				

If you don't know what your Seller ID, you can find it by logging into the Seller Tools and looking at the upper right corner of the page:

New SKU Feed Validation Tool Now Available
 Tuesday, March 26, 2013
 New SKU Feed Validation Tool implemented! You asked and we listened, you now have the ability to validate your own New SKU feeds! Click the new [Validate New SKU Feeds](#) link on the home page to start using this tool today.

Partner Offer

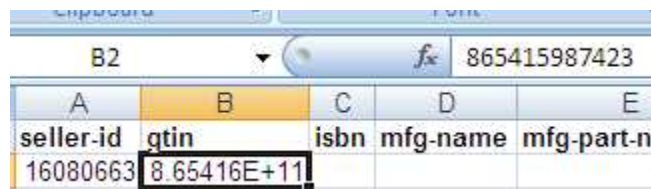

Kabbage You can get up to \$50K for your business in 7 minutes or less. [Check out Kabbage to get cash now.](#) No paperwork needed!

Enter the Seller ID in the “seller-id” field:

	A	B	C	D
1	seller-id	gtin	isbn	mfg-na
2	16080663			
3				

The “gtin” data field accepts 12 and 14 digit UPCs as well as 13 digit EANs. The “gtin” data is required data for all products except Jewelry and Apparel products. Let's enter the 12 digit UPC for the coffee maker:

	A	B	C	D	E
	seller-id	gtin	isbn	mfg-name	mfg-part-n
	16080663	8.65416E+11			

NOTE!: Eventhough you entered 12-digits for the UPC, the data looks funny in the cell of the spreadsheet. You will need to format that cell in order for the data to appear correctly

	A	B	C	D	E
	seller-id	gtin	isbn	mfg-name	mfg-part-n
	16080663	8.65416E+11			

	f_x	Cuisinart
	C	D
	isbn	mfg-name
15987423		Cuisinart
15987424		Cuisinart

The “**mfg-part-number**” is the part number that the manufacturer assigns to its product. In this case, by looking on the Cuisinart web site, we will be entering “**DGB-650BC**”.

DGB-650BC				
B	C	D	E	F
tin	isbn	mfg-name	mfg-part-number	asin
65415987423		Cuisinart	DGB-650BC	

It's very **important** to provide accurate “mfg-part-number” data because Buyers will use that product identifier to find the product using Rakuten.com Shopping's global search.

The “**asin**” data field is Amazon's product identifier. It is an optional field. For this exercise, we will not be using it.

The “**seller-sku**” can represent any product identifier you want. The “seller-sku” provides data on-hand that you can use to list your products in the Inventory Feed. Keep track of your Seller SKU data because it must be unique across all your products. For this example, we'll use “**13-DRT**”

13-DRT				
D	E	F	G	H
mfg-name	mfg-part-number	asin	seller-sku	title
Cuisinart	DGB-650BC		13-DRT	

The “**title**” data is the title of the products. Make sure it describes the product accurately, but not too descriptive because you only have 100 characters. We will enter “**Grind & Brew Thermal 10-Cup Automatic Coffeemaker**”.

Grind & Brew Thermal 10-Cup Automatic Coffeemaker		
G	H	I
seller-sku	title	description
13-DRT	Grind & Brew Thermal 10-Cup Automatic Coffeemaker	

The “**description**” gives more details about the product. Do **NOT** use any special characters, tabs, paragraphs, HTML, etc. because all these will cause the New SKU Feed to error. The “description” data is one continuous string. I have entered the following for the “description” of the coffee maker:

“The easiest way to great coffee is the Cuisinart Grind & Brew! This 10-cup coffeemaker automatically grinds the beans right before brewing to deliver the freshest coffee flavor and the thermal stainless steel carafe keeps it hot and fresh for hours at a time. Because it's fully programmable with a large control panel, it's easier than ever to enjoy a hot cup of coffee any time of day. Quick, easy, delicious – great coffee is automatic with the Cuisinart Grind & Brew.”

G	H	I	J
seller-sku	title	description	main-image
3-DRT	Grind & Brew Thermal 10-	The easiest way to great coffee is the Cuisinart	

The “**main-image**” provides us with a URL from which we can download the image. Make sure that the image you’re submitting meets ALL the image requirements:

- A fully-qualified URL of a full-size image of the relevant product (see example below)
- This is the main image that will be displayed on the product page.
- Images must be at least 500x500 pixels. Preferably JPEG, but GIF are also acceptable.
- The image must be of the product being sold, and must not contain additional objects.
- The image must be in focus, professionally photographed or scanned, with realistic color, and smooth edges.
- Books, Music, and Video/DVD images should be scans of the front cover art, and fill 100% of the image frame. Jewel cases, promotional stickers, and cellophane are not allowed.
- All other products should fill 85% or more of the image frame.
- The full product must be in frame.
- Backgrounds must be pure white.
- The image must not contain additional text, graphics, or inset images.

NOTE!: Any image not meeting all requires will get rejected. The Sellers are responsible for ensuring that the image URLs provided work and link to an image that meets all the requirements.

For our example, I have the following for “main-image”:

http://www.onlinesuperstoreplus.com/images/30129D_BLACK_BLUE_MAIN.jpg

http://www.onlinesuperstoreplus.com/images/30129D_BLACK_BLUE_MAIN.jpg					
E	F	G	H	I	J
nfg-part-i asin		seller-sku	title	description	main-image
30129D_BLUE_CASE		30129D_B	26" Premi	Great Beautiful Hookah	http://www.onlinesuperstoreplus.com/images/30129D_BLACK_BLUE_MAIN.jpg

The “**additional-images**” gives alternative views of the products. These are not required, but they do follow the same image requirements as the “main-image” data. The “additional-images” should not be the same as the “main-image”. If you are providing more than one “additional-images” image URLs, then they need to be separated by a **pipe** (“|”). The following is an example of the data entered:

http://www.onlinesuperstoreplus.com/images/30129D_CASE.jpg|http://www.onlinesuperstoreplus.com/images/30129D_BLACK_UNIVERSAL_STEM.jpg|<http://www.onlinesuperstoreplus.com/images/>|<http://www.onlinesuperstoreplus.com/images/>|<http://www.onlinesuperstoreplus.com/images/>|<http://www.onlinesuperstoreplus.com/images/PAN.jpg>|<http://www.onlinesuperstoreplus.com/images/TONG.jpg>

J	K	L	M	N	O	P	Q
age	additional-images	weight	features	listing-pric	msrp	category-i	keywords
www.onlinesuperstorepl	http://www.onlinesuperstoreplus.com/ima	5	26" Premi	69.99	89.99	2483	26" Hooka 3

Notice the data is one long string without any spaces.

The **“weight”** data is numeric only and it’s in pounds. Do NOT include “lb”, “lbs”, etc. The “weight” data is used in the calculation of the default Rakuten.com Shopping shipping calculations, so it’s important that this data is accurate as possible.

The following will be used in the example:

“5”

5		
K	L	M
additional-images	weight	features
http://www.onlinesupers	5	
http://www.onlinesupers	5	

The **“features”** data are the bullet points about the product you want to highlight. You do not need to include any bullet points a part of the data because the Rakuten.com Shopping web pages are designed to automatically do that. Do NOT use any special characters, tabs, paragraphs, HTML, etc. because all these will cause the New SKU Feed to error. The “features” data are separated by pipes (“|”) and the following will be entered:

“Automatically grinds whole beans before brewing|24-hour fully programmable|10-cup (5 ounces each) double-wall insulated thermal carafe”

K	L	M	N	O	P	Q	R	S	
images	weight	features	listing-price	msrp	category-id	keywords	product-set-id	AC Type	Age
com/db_assets/large_im	10	Automatically grinds whole beans b	235.95	235.95					

The **“listing-price”** and **“msrp”** are exactly the same data that our system pulls from different places in order to facilitate functionality on the Rakuten.com Shopping site.

NOTE: The “lising-price” is NOT the sell price when listing the product on the marketplace.

Do not put the dollar symbol among the data, it should be purly numerical and should not exceed two decimal places. The following will be used in our example:

“235.95”

235.95		
N	O	P
listing-price	msrp	category-id
235.95	235.95	

The **“category-id”** will determine which category your new product will live in. Getting the correct “category-id” is important because we base the commission rate by category. For this, we will need the Category Attribute PDF for Home & Outdoor. Looking at that document, we find:

0247	Mixer Attachments	Same as parent
0534	Bread Makers	Same as parent
0249	Chocolate Fountain	Same as parent
0248	Coffee & Espresso Machines	[Coffee Machine Type], [Electric Power Supply], Color Class
0250	Coffee Grinders	Same as parent
0559	Coffee Roasters	Same as parent
0751	Cooktops	Same as parent
	Deep Fryers	Same as parent

The “category-id” is “0249”, which is “Coffee & Espresso Machines”. The next column has the attribute associated with that category, which we will return to later.

249			
N	O	P	Q
listing-price	msrp	category-id	keywords
235.95	235.95	0249	

The “keywords” data should be words that are above and beyond what is presented in the “title” data, since the words in the “title” are already included in search. Do NOT use any special characters, tabs, paragraphs, HTML, etc. because all these will cause the New SKU Feed to error. The “keywords” data should be separated by pipes (“|”) like the following:

“coffee|maker|brew pause|stainless steel|grind and brew”

coffee maker brew pause stainless steel grind and brew				
	N	O	P	Q
	listing-price	msrp	category-id	keywords
beans b	235.95	235.95	0249	coffee maker brew pause stainless steel grind and brew

The “product-set-id” groups like products together. Rakuten.com Shopping does not have parent/child product relationships, so we use the “product-set-id” to group products in the same family. For example, if our coffeemaker came in 5 different colors, each of those products are treated as totally separate and would occupy their own rows of data. By assigning all 5 coffeemakers the same “product-set-id”, they will all sit on the same Rakuten.com Shopping web page with pull down menus to select color.

Since our coffeemaker comes in only one color, let’s pretend that they actually come in different colors to create an example. Let’s enter the following for the “product-set-id”: “coffeemaker1”

Font		Alignment		
fx		coffeemaker1		
	Q	R	S	
id	keywords	product-set-id	AC Type	Age
249	coffee maker brew pause	coffeemaker1		
249	coffee maker brew pause	coffeemaker1		
249	coffee maker brew pause	coffeemaker1		
249	coffee maker brew pause	coffeemaker1		
249	coffee maker brew pause	coffeemaker1		

NOTE! When using the “product-set-id”, do NOT include the color in your “title” data.

We have completed the “**Core**” data of the new products. The next step we need to include the **Attribute** data, which can be found on the same [Category Attribute PDF](#) we use to find the “category-id” data. We have already looked up the “category-id” as seen below:

0266	Mixer Attachments	Same as parent
0247	Bread Makers	Same as parent
0534	Chocolate Fountain	Same as parent
0249	Coffee & Espresso Machines	[Coffee Machine Type], [Electric Power Supply], Color Class
0248	Coffee Grinders	Same as parent
0250	Coffee Roasters	Same as parent
0559	Cooktops	Same as parent
0251	Deep Fryers	Same as parent

The third column contains the Attributes applicable to the “Coffee & Espresso Machines” category. Notice that two of the three Attributes are in brackets. These brackets indicate that the Attributes are required. For our example, “**Coffee Machine Type**” and “**Electric Power Supply**” are both required, while “**Color Class**” is optional.

Each Attribute has Values, which are listed in the second part of the Category Attribute PDF.

Cleaning Glove Type	Choose one of the following values:
	Disposable
	Reusable
Coffee Machine Type	Choose one or more of the following values:
	Cappuccino
	Drip Brewer
	Espresso
Color	Enter any String value.

Notice that “Coffee Machine Type” has 3 Values:

- **Cappuccino**
- **Drip Brewer**
- **Espresso**

These are the only Values that our system will take, so if you try using something else, it will cause your New SKU Feed to fail. We will use “**Drip Brewer**” in our New SKU Feed example.

Drip Brewer			
	AM	AN	AO
ies Clamp Type	Cleaning Glove Type	Coffee Machine Type	C
		Drip Brewer	

If you want to enter two or more Attribute Values, the you need to separate them with a **carot (“^”)**. Here is an example:

“Drip Brewer^Espresso”

Here are the other two Attributes and their Values as they appear in the Category Attribute PDF:

Electric Power Supply	Choose one or more of the following values:
	Battery Operated
	Cord
	Cordless
Color Class	Choose one or more of the following values:
	Beige
	Black
	Blue
	Brown
	Burgundy
	Clear
	Gold
	Green
	Grey
	Off White
	Orange
	Pink
	Purple
	Red
	Silver
	White
	Yellow

For “Electric Power Supply” and “Color Class”, we’ll use “**Cord**” and “**Silver**” respectively.

AQ	AR	AS	AT	AU	AV	AW	AX	AY	AZ
Color Class	Cookware	Corks	Cutlery	Depart	Detergent	Deterge	Dispos	Dispos	Electric Power Supply
Silver									Cord

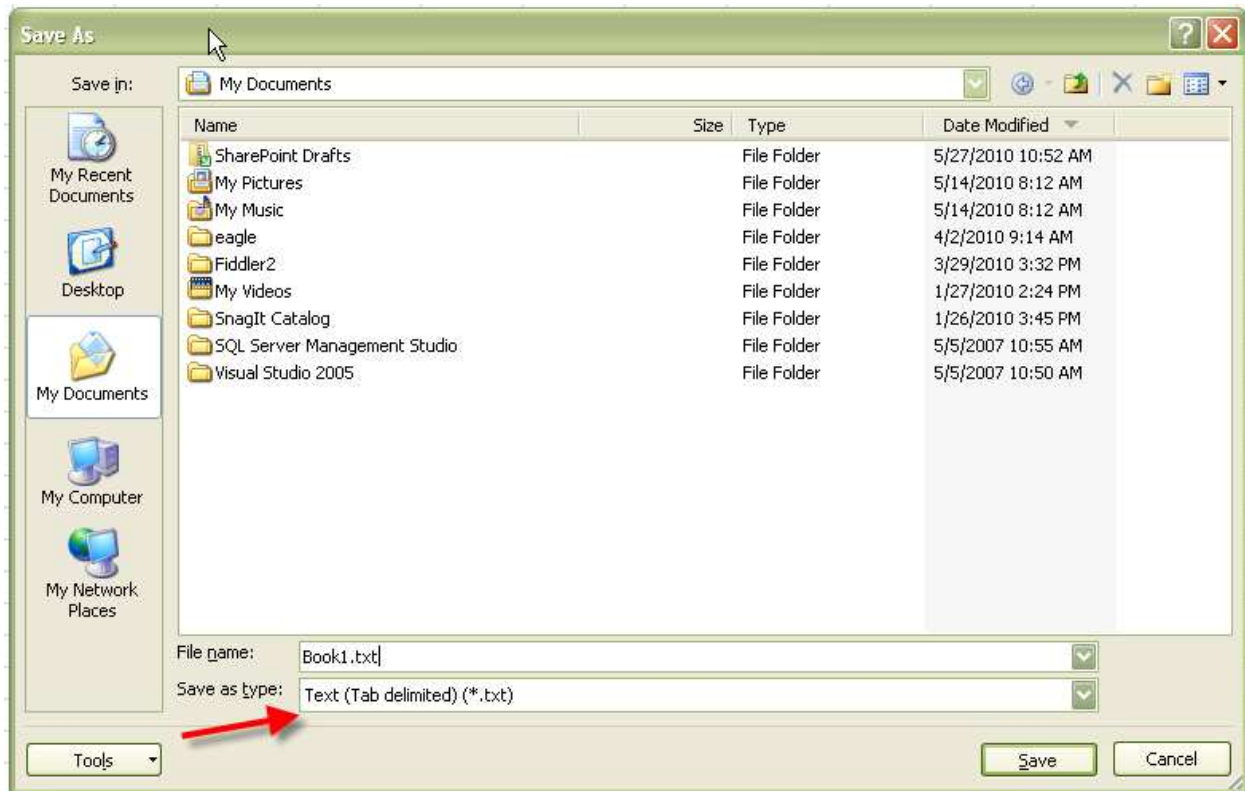

NOTE!: Keep in mind that different products will have different number of Attributes and Values, so keep the Category Attribute PDF as a reference to make data entry easier. You may be required to enter a lot more Attribute Values than our example.

We have now completed all the data need to add this product to the Rakuten.com Shopping catalog of products! However, we need to complete one last step before we submit it for processing.

NOTE! The Excel file needs to be converted into a **Text (Tab Delimited)** file before it can be processed.

To save as a Text (Tab Delimited):

- “Save As” and the following pop-up will appear:

- Select “Text (Tab delimited)(*.txt)” from the “Save as type” drop down.
- Click “Save”

Once you have the Text (Tab Delimited) version of your New SKU Feed, please submit it to MPIntegration@mail.rakuten.com for processing.

NOTE! The Rakuten.com Shopping Marketplace Integration (MPIntegration@mail.rakuten.com) also provides great assistance with regards to any questions you may have regarding your New SKU Feed.
